
SYSTEM REQUIREMENTS

D16 software is provided as plug-ins only. It's not a standalone program so you need a host application to use it.

Hardware requirements / recommendations are based on estimates performed on available computers at D16 Group HQ, and therefore cannot cover all possible configurations available on the market. CPU usage may vary widely depending on the manner in which the product is used. Factors that may contribute to variance in CPU usage include particular patch and its complexity, the global quality setting, project sample rate. **In order to form a better understanding of how a plug-in will behave within your current setup, we highly recommend downloading the demo and giving it a try.**
